

NMLS Enhancement: Reset an NMLS Username and Password with Ease

Jul 25

CSBS has enhanced NMLS to provide users more self-service options to reset their username and password without having to contact the NMLS Call Center or their account administrator. This enhancement puts the ability to manage a personal task back into the hands of system users.

The new username and password reset process follows best practices for maintaining secure NMLS access, including continued use of multi-factor authentication to better manage user identification.

How it works

- The first time an NMLS user logs in, they will be asked to add a new recovery email, preferably a personal email to which they will always have access, even if they change employers. Users can choose to provide a second recovery email as a backup recovery method.
- Recovery email address can be used to:
 - Log in (using a username or initial recovery email address)
 - Reset a password
 - Recover a username
 - Enable and unlock an account
- Users also can add a mobile phone number, which can be used when resetting a password. An NMLS user's account will still lock after five unsuccessful attempts. However, users can follow the system prompts to reset it easily.

Purpose of Recovery Information

The recovery method provides a significant capability for forgotten login crede recommend providing more than recovery method and at least one email address for easy recovery in that you change employers.

NMLS user benefits

- Save time managing NMLS account access and spend more time focusing on your business.
- Self-service password options eliminate the need to contact the NMLS Call Center for support.
- Greater satisfaction using NMLS knowing username and password changes can be handled easily and quickly.
